## Forensic Diskette Data Collector<sup>TM</sup>

---

CopyPro Computer Forensics Products

### Unattended transfer of diskette data to hard drive

#### Features

- Reads diskette and writes diskette image to PC's hard drive
- Diskette image file compatible with forensic analysis disc tools
- Diskette image readable by computer forensics programs
- MD5 code created and logged for each diskette
- Robotic system reads up to 150 diskettes unattended

#### Benefits

- Fast systematic high volume diskette-to-file processing
- Unattended operation saves time and money
- Diskette-to-file system that supports computer forensics standards

---

#### Overview

Transferring diskettes to a PC's hard drive is a very time consuming task when done manually.

CopyPro's autoloading diskette reader and Auto Disk Plus software automate the disc loading and reading process. To allow auditing of system activity and diskettes, Auto Disk Plus creates a log file comment and MD5 hash code for each diskette processed by the system.

In summary, the CopyPro system offers a diskette-to-file processing solution that supports computer forensics standards and features unattended operation.

#### Diskette-to-file process

- Floppy diskettes are collected for analysis by computer forensics software
- Up to 150 diskettes can be loaded into CopyPro's robotic autoloading diskette reader. The disk capacity is based on input bin set options
- The Auto Disk Plus application is run and a job name is entered
- Diskettes are automatically loaded into a floppy drive on the diskette reader system
- For readable diskettes, the diskette image file is saved to the hard drive. If the diskette is not readable, it is sent to the reject bin
- Auto Disk Plus makes a log file entry for each diskette processed which contains job information and MD5 hash code for each diskette

#### Specifications

##### Diskette Data Collector

- CopyPro robotic diskette autoloader
- High speed 2x floppy drive
- 50 Disk bin set
- Auto Disk Plus software

##### Options:

- 150 Disk bin set
- Replacement floppy drive

##### System requirements:

- Computer with 1GHz (or faster) Intel or Athlon processor
- Windows 2000 or XP
- 1GB hard drive capacity
- 256MB RAM
- Serial port
- USB port
